

ABSTRACT OF THE DISCLOSURE

A watch having a civil time display (12, 16), a solar time display (13, 18) and a mechanism for correction (24, 34, 36) of these displays. The correction mechanism is arranged in such a way as to allow the relative desynchronization of the civil time and solar time displays. A way of displaying this desynchronization (20, 22) is provided.
